TO BE COMPLETED BY PHYSICIAN: MEDICAL CERTIFICATION

BALTIMORE, MARYLAND 21203-3146

DIVISION OF VITAL RECORDS, P.O. BOX 13146,

TO THE HOSPITAL OR ATTENDING PHYSICIAN: The law requires that the death certificate be executed within 72 hours after death. Page 6 must be completed by the hospital or attending physician.

TO THE FUNERAL DIRECTOR: After this certificate has been signed by the attending physician and completely filled in by the funeral director, it must be submitted to the State Department of Health and Mental Hygiene for use as the burial-transit permit. Pages 1, 2, 3 should be filed within 72 hours after death with the State Dept. of Health and Mental Hygiene prior to burial, cremation, or removal.

IMPORTANT: If item 28 is marked, or item 23 shows any injury, or other traumatic event, the medical examiner must be notified at once.

1. The first part of the report is a general description of the project. It includes the title, the objectives, the scope, and the organization of the report. The title is "The Effect of Temperature on the Rate of Reaction of Hydrogen Peroxide with Potassium Iodate". The objectives are to determine the rate of reaction at different temperatures and to determine the activation energy of the reaction. The scope is limited to the reaction of hydrogen peroxide with potassium iodate in acidic solution. The organization of the report is as follows: Introduction, Experimental, Results, Discussion, and Conclusion.

2. The second part of the report is the experimental section. It describes the apparatus and the procedure used to carry out the experiment. The apparatus consists of a reaction flask, a thermometer, and a stopper. The procedure involves measuring the volume of oxygen gas evolved at different temperatures. The reaction is carried out in a beaker of water, and the volume of gas evolved is measured by the displacement of water in an inverted graduated cylinder.

3. The third part of the report is the results section. It presents the data obtained from the experiment. The data are shown in a table and a graph. The table shows the volume of oxygen gas evolved at different temperatures. The graph shows the rate of reaction (volume of gas evolved per unit time) versus temperature. The rate of reaction increases with temperature, and the activation energy of the reaction is determined to be 50 kJ/mol.

4. The fourth part of the report is the discussion section. It discusses the results of the experiment and compares them with the theoretical predictions. The results show that the rate of reaction increases with temperature, which is in agreement with the theoretical predictions. The activation energy of the reaction is determined to be 50 kJ/mol, which is in good agreement with the theoretical value of 52 kJ/mol.

1. The first part of the report is a general description of the project. It includes the title, the objectives, the scope, and the organization of the report. The title is "The Effect of Temperature on the Rate of Reaction of Hydrogen Peroxide with Potassium Iodate". The objectives are to determine the effect of temperature on the rate of reaction and to determine the activation energy of the reaction. The scope is limited to the reaction of hydrogen peroxide with potassium iodate in acidic solution. The organization of the report is as follows: Introduction, Experimental, Results, Discussion, and Conclusion.

2. The second part of the report is the experimental section. It describes the apparatus and the procedure used in the experiment. The apparatus consists of a reaction flask, a thermometer, and a stopper. The procedure involves the preparation of solutions of hydrogen peroxide and potassium iodate, the measurement of the time taken for the reaction to occur at different temperatures, and the calculation of the rate of reaction.

3. The third part of the report is the results section. It presents the data obtained from the experiment. The data are as follows:

Temperature (°C)	Time (s)	Rate (1/time)
20	120	0.0083
30	60	0.0167
40	30	0.0333
50	15	0.0667

4. The fourth part of the report is the discussion section. It discusses the results of the experiment and compares them with the theoretical predictions. The results show that the rate of reaction increases with temperature, which is in agreement with the theoretical prediction. The activation energy of the reaction is calculated to be 50 kJ/mol.

5. The fifth part of the report is the conclusion section. It summarizes the findings of the experiment and states the conclusions. The conclusions are that the rate of reaction increases with temperature and that the activation energy of the reaction is 50 kJ/mol.

1. The first part of the report is a general description of the project. It includes the title, the objectives, the scope, and the organization of the project. The title is "The Effect of Temperature on the Rate of Reaction of Hydrogen Peroxide with Potassium Iodide". The objectives are to determine the effect of temperature on the rate of reaction and to determine the activation energy of the reaction. The scope is limited to the reaction of hydrogen peroxide with potassium iodide in aqueous solution. The organization of the project is as follows: a general description of the project, a description of the experimental procedure, a description of the results, and a conclusion.

2. The second part of the report is a description of the experimental procedure. It includes the materials, the apparatus, and the procedure. The materials are hydrogen peroxide, potassium iodide, and sulfuric acid. The apparatus is a reaction flask, a thermometer, and a stopwatch. The procedure is as follows: a known volume of hydrogen peroxide is added to a known volume of potassium iodide in a reaction flask. The temperature of the reaction mixture is measured. The time taken for the reaction to occur is measured. The rate of reaction is determined from the time taken for the reaction to occur.

3. The third part of the report is a description of the results. It includes the data, the graphs, and the calculations. The data is as follows:

Temperature (°C)	Time (s)
10	120
20	60
30	30
40	15

The graphs are as follows:

The calculations are as follows:

4. The fourth part of the report is a conclusion. It includes the summary of the results and the conclusions. The summary of the results is that the rate of reaction increases with increasing temperature. The conclusions are that the activation energy of the reaction is 50 kJ/mol and that the reaction is first order with respect to hydrogen peroxide and first order with respect to potassium iodide.
